

It's Called IriTrack®

"Technology... Safety... Value..."

The IriTrack® system combines several data and voice technologies in a single unit that utilizes satellite equipment to communicate between the vehicle and the IriTrack® control center. Inside the instrument are a GPS module, an Inclinometer, a G-Force Meter, an Iridium Satellite Voice/Data Modem, a micro-computer and software.

The IriTrack® Real Time Satellite Tracking System monitors your vehicle location, speed, and situation while you go on with your race. It automatically sends an alert if you stop, or crash, or take a big hit. It records your information every 5 seconds. It sends your information to IriTrack® control every 120 seconds. You don't have to do anything to make it happen. Just hook it up. IriTrack® does the rest. It's working all the time. Every mile, every turn, every lump, bump and thump.

On the front panel there are three buttons; a red ALARM button, a blue Phone button, and a green AUX button.

To Use The IriTrack System

To Send An Alert:

Push the red or green button.
Once Is Enough!
Your exact position is sent
To IriTrack Automatically.
(Transmit LED Briefly Goes
Green When it Sends Alert)

After You Send A Red Alert:

Wait for an IriTrack voice contact to respond.
Average response time is 3 minutes. Phones
are dialing and connecting to you. Listen for
the IriTrack box to talk to you. Stay Focused!
One Button Push is enough!

After You Send A Green Alert:

There is nothing more for you to do.
The alert has been received by IriTrack.

It sends your information through an Iridium Satellite telephone every 120 seconds. That means it's making a satellite telephone call every two minutes. So, every hour it makes 30 phone calls on the satellite telephone. If your race goes six hours, that's 180 satellite telephone calls from your race car to IriTrack® control.

In an emergency situation IriTrack® control can talk directly to you, or you can call IriTrack® control and talk directly to them. The voice telephone calls between the race car and IriTrack® control are in real time, with a real person talking to you. All of these telephone calls are included in your basic rental price of \$275.00. The live web tracking features are no extra charge. When you run the IriTrack® Real Time Satellite Tracking System, you are on the web. Anyone with access to the internet can follow your race progress at all times. Family, friends, and sponsors can see exactly where your race car is during the race.

If you stop... IriTrack® knows.

If you take a 10g impact... IriTrack® knows.

If you dump it on the door... IriTrack® knows.

"It's The Call That Counts!"
